

~ *New Features* ~

- **Enhanced Patient Statements:** New fields and changes to the patient statement format greatly improves the readability and understanding of the statements generated for your patients. The format now includes the ability to see charges, payments, adjustments, and remaining balance per procedure on each individual line.
- **Charges & Payment screen detail:** A new option now enables you to view all line-item detail of payments and adjustments for any given procedure, directly under the corresponding code. This is a “view-only” option, and is a huge time-saver for billing look-up, allowing you to see all financial detail for a particular bill on the same screen.
- **Multi-select reporting:** The reporting module is significantly improved with this feature! Lytec 2009 now offers the ability to select individual codes or ranges of codes which are not consecutive in the data table. This selection can be for one code or many codes which do not appear in order. This allows for virtually any report to be produced with only the exact criteria desired by the user.
- **Billing Status Code:** The new billing status code is a “flag” you can use on individual billings to filter or isolate these bills. This code is stored per billing number and can be used as a filter to include or exclude on all financial reports and when printing claims and statements, or sending electronic claims. The flag is user-defined and you can create your own pull-down list for this feature.
- **Charge from the appointment scheduler:** Now you can easily create a charge for a patient directly from the appointment window. Making your work flow easier, the front desk person can now enter the charge and copay immediately by clicking on the appointment name and beginning the detail in the charge window. Once finished, the program returns you to the scheduling window to continue.
- **Reports Add the Location and Facility sub-totals:** A new option has been added to give you the ability to sub-total by both location and facility. This is now available on all the financial reports including all the aging reports, day sheets, transaction journal, practice analysis, charge and payment analysis reports, and more. Better reporting and analysis for your practice!
- **Billing Inactive Codes:** This new feature will warn you when you save the bill of any and all inactive values used in that bill, in one warning screen. This validation occurs when you save a bill in Charges and Payments or Pending Transactions. It works with all lists that have the ability to mark certain items “inactive” - cpt codes, dx codes, insurance companies, etc.... This is a great way to check for billing mistakes before they are submitted.
- **New Report: Patient Payment Annual Detail -** Lytec 2009 now includes the ability to print a *year-end income tax report* for patients that show all the detail for payments received and posted during the calendar year.
- **Patient Merge Utility:** Multiple or near-identical records can occur in the program that need to be merged together for a variety of reasons. This new utility will allow you to take two records and merge the financial detail under one patient chart, and remove the duplicate from the system.
- **Month-to-date and Year-to-date Totals:** These MTD and YTD totals have been added to the Day Sheet, Transaction Journal, and Practice Analysis. This gives you a clearer picture of the overall financial status of the practice.
- **Share Appointment Templates:** This new feature allows the user to create and/or edit a template for a single resource and then allow other resources to use that same template. The process of using templates now becomes much more manageable and efficient with your scheduler windows.
- **Practice Analysis Subtotals -** Multi-provider offices will want to take advantage of the new ability to run the Practice Analysis with subtotal information by provider in detail. A great new addition to a stock report.

>>>> more >>>

- **New data fields for custom reports:** Approximately 60 additional data fields are now available for various custom reports to make Lytec 2009 more flexible and more customizable for your use. You can now create new or revised claim formats, patient statements, lists, financial reports, and more with all fields available for inclusion.
- **Patient Notes:** Lytec 2009 adds additional security selection options to allow or restrict users from viewing, adding, deleting, and modifying patient notes. This will allow the Lytec administrator to set security settings at the User or User Type level. The new feature also adds entries in the Audit Trail for each user that adds, deletes, or modifies any patient notes.
- **Pre-payment activity Zero-balance suppression:** Ease-of-use feature - a paper saving process for identifying unapplied prepaids. By clicking on this feature, you can now identify only the prepayments not already applied to billings.
- **Lytec MD - EMR integration:** The complete package includes a seamless integration with the all-new LytecMD EMR Solution. This software includes the incredible practice management features of Lytec 2009 and the proven EMR clinical features of Practice Partner, a software that has helped practices of all sizes improve their quality of care and financial outlook.
- **SpringCharts - EMR integration:** Lytec 2009 also continues the seamless integration with Spring Charts EMR Medical Records System, the proven electronic health records system for the office ready to move into clinical integration with their practice management software.
- **E-prescribe integration:** Ease-of-use features for e-prescribing include integration with Relay Health electronic prescriptions and DoctorFirst e-prescribe. Take advantage of CMS Medicare incentives for 2009 and beyond, by moving your prescriptions, refills, and drug interaction information to on-line prescribing for accurate, fast, and easy prescriptions for your patients.

All these features and more ! Move up to the all-new Lytec Medical 2009 today!
