Lytec® MD

Bright Note Technology™

One Touch Sets Everything in Motion

Lytec® MD with Bright Note Technology uses dynamic processing power to instantaneously populate patient data across the entire chart from a single note. Bright Note Technology's intuitive design helps physicians feel more comfortable with using an EHR to care for their patients.

One Note. One Touch.

Using their preferred charting style, physicians and other providers can capture data in a single screen note. Then, with one touch, searchable patient data instantly synchronizes across the complete chart.

Lytec MD with Bright Note Technology improves efficiency and enhances clinical reporting and health outcomes.
Single Note Synchronization

Behind the technology, dot codes help complete the single screen note and then — automatically — synchronize data to the appropriate folders within the electronic chart. This single note-centric approach means less time dealing with the EHR and more time caring for patients.

Clinical Quality Data

Bright Note Technology helps you quickly search and access data throughout the entire practice record. The ability to access patient information and generate meaningful use data is essential to delivering exceptional health outcomes and driving profitability.
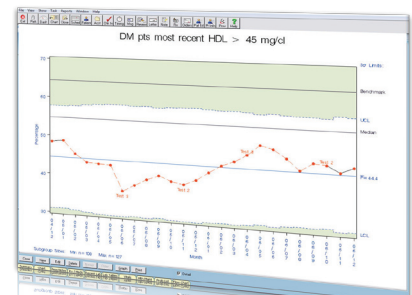

By automatically categorizing patient- and practice-level data into searchable and exportable fields, Bright Note Technology provides physicians and staff with quick access to information to optimize reimbursements, facilitate clinical care reporting and generate pay-for-performance data.

1. Single Screen Charting makes it easy for physicians to complete the note using their prefered input method.

2. With one touch, data is instantly synchronized to appropriate folders within the chart.

3. Searchable patient data is automatically generated to help quickly produce meaningful clinical care reporting.

Flexible Charting Style

By enabling healthcare professionals to use their preferred input method, Medisoft Clinical delivers efficient and easy-to-use software that supports accuracy and consistency of patient health records. Input methods include:

- *Speech Recognition* – Providers who prefer to input verbally can use our advanced speech recognition software powered by Dragon NaturallySpeaking to quickly enter patient data.

- *Templates* – Whether input on a digital tablet or personal computer, custom templates make data collection extremely efficient because the templates are designed to your preferences and group's specialty.

- *Keyboard* – Simply enter the information on a single screen note and our software does the rest, reducing keystrokes and eliminating redundancies.

- *Transcription* – Bright Note Technology also supports transcription if you prefer to dictate live, with a recorder or using handwritten notes.

About Lytec MD

McKesson's Lytec® MD is a combined practice management/ electronic health record solution that provides a clinical upgrade path to the current users of the Lytec practice management system. With Lytec MD, Lytec users can minimize practice disruption by keeping the practice management system they know and adding the EMR that will take them to the next level of practice automation.
